Verizon teams with In Motion Technology, transforms whips into rolling 4G LTE hotspots

By [Billy Steele](#) posted Jan 10th 2012 1:15PM

Looking to get a bit more **4G LTE** access in your Maybach than what your **Galaxy Nexus** affords you? The wait may soon be over as **Verizon** and In Motion Technology have announced the "first" wireless mobile router tech for use in vehicles. Making use of the latter outfit's onBoard system, Aventadors everywhere can be converted into secure mobile hotspots along with a network management that monitors the status of the whole kit. VPN security is also present, in all its mobile-optimized glory. The In

Motion Technology has been widely used in public safety scenarios, including the onBoard Mobile Gateway in ambulances and other municipal vehicles. If you're looking to find out more on the duo's announcement, hit the full PR just beyond the break.

Verizon can not even take care of the customers they all ready have, they were a good provider ten years ago when I signed up with them, I just ditched them when my contract expired a month ago and what a relief, they screwed up every single request, invoice and service for the last year, their support used to be perfect, now no body knows or is allowed to make a decision or fix a problem, I told them I was thinking about jumping ship and the only response was, well if you want to leave the biggest service provider in the US go right ahead, I did, and they will not last too many more years with that attitude.

"The wait may soon be over as Verizon and In Motion Technology have announced the first wireless mobile router tech for use in vehicles."

HELLO!!! Didn't Chrysler already have this sort of tech in their vehicles like TWO years ago? So please don't say this is the first.

Well i think its the first LTE rolling hotspot.... but i do agree that it isn't clear. I know that Chevy still provides the mobile wifi, through AutoNet mobile.... Chrysler may still as well, but this is all besides the point.

4G LTE in the first sentence.
