In Motion, Clevest partner on "most integrated" smart grid system

By *blundin*

Created *Jan 18 2012 - 9:02am*

Wireless systems provider In Motion Technology is partnering with Clevest Solutions to offer what they call the "most integrated mobile workforce management and smart grid deployment system in the utility industry."

Clevest's workforce automation and smart grid deployment software coupled with In Motion Technology's in-vehicle, secure mobile router communications platform will connect the mobile workforce to the enterprise. In Motion's system provides utility field workers with seamless and secure access to corporate applications over wireless broadband networks including Wi-Fi, private and commercial cellular, public safety 700MHz, municipal mesh, private radio networks and satellite.

The combined technologies provide utilities with myriad efficiencies including resource optimization, cost reduction and improved response times from rapidly automating field activity.
