Verizon Wireless Announces Public-Safety LTE Partnerships at CES (1/10/12)

From the 2012 International Consumer Electronics Show (CES), Verizon Wireless announced several public-safety communications partnerships. Verizon Wireless and ESCORT announced a technology collaboration using Verizon's 4G Long Term Evolution (LTE) network and the ESCORT mobile rugged PC, which will interface with public-safety and emergency-response command centers.

ESCORT SmartOffice provides full PC functionality with Verizon 4G LTE Internet connectivity, navigation, Bluetooth and a reverse camera. This demonstration also features TechRadium's Command Core software and the Sierra Wireless AirPrime MC7750 embedded wireless module, both of which are integrated into the ESCORT product.

In addition, Verizon Wireless and In Motion Technology announced a first wireless mobile router system for securely extending the enterprise network to the vehicle over Verizon's LTE network. The In Motion mobile gateway transforms vehicles into secure, mobile hot spots; a network management system monitors network health and communications; and a mobile-optimized virtual private network (VPN) server provides end-to-end security.

"In the case of EMS, 4G LTE provides real-time sharing of video, voice and data that can have a dramatic impact on patient outcomes," said Kirk Moir, president and chief operating officer for In Motion Technology.
