(Release Date: Feb-17-2010)**Contact Information**Contact: Dean Erickson, Systems Analyst, 970-224-6105, derickson@fcgov.com

Transfort today announced that it has deployed In Motion Technology's mobile networking equipment to enable new video and information systems providing passengers with improved security and up-to-the-minute bus location.

Transfort has installed In Motion's onBoard Mobile Gateway in all of its fixed route buses to serve an on-board video camera system that captures and stores video images while the bus is in service. At the bus garage, the Gateway transmits selected onboard video and other information over a secure, high speed wireless link. The Gateway will also allow operations and law enforcement staff to view live video from nearby vehicles, further improving the safety and security of operators and passengers.

Transfort will also utilize GPS (global positioning system) data reported using a cellular connection from In Motion's Gateway to identify the exact location of buses along their routes. In the future, this information will be displayed to passengers in a variety of forms through Transfort's Advanced Traveler Information System (ATIS) that is currently under development. The Gateway will provide reliable, secure connectivity for systems performing route and schedule management, fare collection and other applications serving Transfort passengers and staff.

"Our research has shown that residents are increasingly concerned about their carbon footprints and are looking for alternatives to driving that are both modern and convenient," said Dean Erickson, Transfort's Director of Information Systems. "Transfort is committed to becoming this alternative, and to that end is putting the infrastructure in place to be able to meet these expectations. Once deployed, ATIS will provide passengers with information about routes, schedules and the location of buses in real time and can be accessed at stops, in stations, over the Internet, and on mobile phones. This will make traveling on Transfort even more convenient and give passengers better control over their commute and their day."

For more information about Transfort and services offered, citizens are encouraged to stop by either the CSU Transit Center (north end of Lory Student Center) or the Downtown Transit Center (250 N Mason). Information can also be found on Transfort's web site at <http://fcgov.com/transfort>.
